Cross-Product Protecting against #GenAl apps #MicrosoftSecuritySolutions

I love story telling, especially if I can try to explain it in one slide. It's beautiful to see how our products work in synergy with one another.

Infographic SCENARIO

- Starting your #GenAl Governance & Protection
- Ensure your Data Governance across your #collaboration products such as SharePoint, Teams, OneDrive are reviewed. Review any legacy documents and library inheritance on SPO and break them
- Ensure Data Classification (classify & encrypt) files are done via Purvew. Use Auto-labelling & Trainable Classifiers to help, both data at rest & in-transit
- Sanction (approve) only GenAl approved apps via MDA.
- U Turn on pre-set policies via Al HUB such as DLP, Insider Risk and **Communication Compliance**
- Enable Insider Risk Conditional Access via Entra

p.s. I love how you can schedule post now, when this is published, I'll be asleep:)

Introducing Restricted SharePoint Search to help you get started with Copilot for Microsoft 365

TJ Devin

Published Mar 06 2024 08:00 AM

72.4K Views

Update June 24, 2024: Restricted SharePoint Search has entered general availability.

Copilot for Microsoft 365 reasons across your universe of data—all your emails, meetings, chats, documents, and more, plus the web. Copilot also inherits your existing Microsoft 365 security, privacy, identity, and compliance policies—so you know it's enterprise-grade. Over the past year, we've learned that this experience is most effective when coupled with strong content management and data governance practices. As organizations roll-out Copilot across their workforce, we have seen that some are comfortable with their existing practices, some are making adjustments in parallel, and some want more time to update their data governance practices.

Restricted SharePoint Search gives you time to review and audit site permissions. It is designed to help you maintain momentum with your Copilot deployment while you implement robust data security solutions from <u>Microsoft Purview</u> and manage content lifecycle with <u>SharePoint Advanced Management</u>. Combined, these two solutions offer a complete solution for data discovery, protection, and governance.

How Restricted SharePoint Search works with Copilot

Restricted SharePoint Search allows you to disable organization-wide search, and to restrict both Enterprise Search and Copilot experiences to a curated set of SharePoint sites of your choice. Additionally, whether you have enabled Enterprise Search or Restricted SharePoint Search, users in your organization will still be able to interact with files and content they own or that they have previously accessed in Copilot.

Restricted SharePoint Search is off by default. If you decide to enable it Copilot and non-Copilot users will be able to find and use content from

Frequently asked questions

What to do next?

(i) Important

Restricted SharePoint Search is designed for customers of Copilot for Microsoft 365.

What is Restricted SharePoint Search?

Restricted SharePoint Search is a setting that helps you as a SharePoint Administrator or above in Microsoft 365 to maintain a list of SharePoint sites ("allowed list") that you have checked the permissions and applied data governance for. The allowed list defines which SharePoint sites can participate in organization-wide search and Copilot experiences. By default, the Restricted SharePoint Search setting is turned off and the allowed list is empty. This feature is currently available as Public Preview for customers who have Microsoft 365 and Copilot licenses.

Restricted SharePoint Search allows you to restrict both organization-wide search and Copilot experiences to a curated set of SharePoint sites of your choice. Additionally, whether you have enabled
